

ACCESSORY

MOUNTING STUD

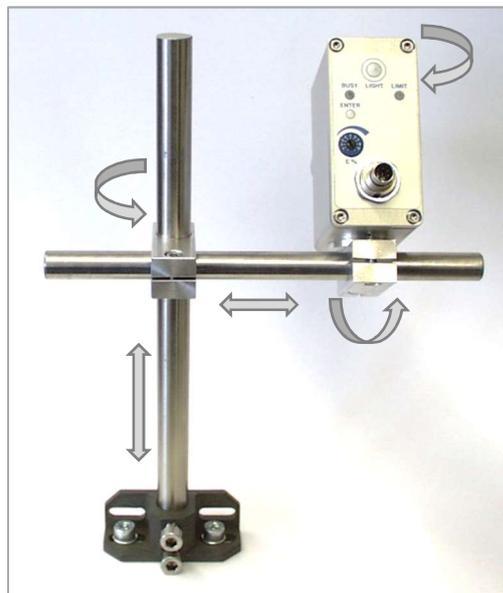

for **MAURER** pyrometers series KTRD / QKTRD 4000 and 4400

Secure mounting of your pyrometer is essential for measurement accuracy. The **MAURER** mounting stud allows a precise and fixed alignment of your pyrometer to your measuring object and protects your device from falling. Thanks to the two axes¹ and the also rotatable clamping piece, a fixation to any point in space is possible. Depending on the application, you can choose between different versions of the stud.

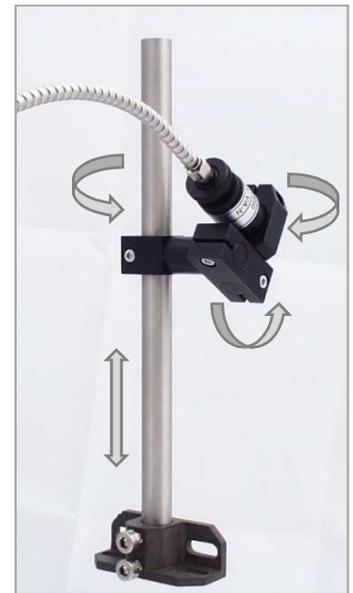

¹ not for standard mounting stud, as there is no x-axis

Mounting stud universal
